HEALTH INSURANCE EXPERIMENT

PREFACE

This codebook describes the contents of a data file from the Health Insurance Experiment (HIE), a large social experiment conducted by The Rand Corporation from 1974 to 1982 under a grant from the U.S. Department of Health and Human Services. The HIE is issuing a number of data files, grouped in topical series, with associated documentation.

The codebook is the second of a projected three volumes documenting files in the master sample series. It provides demographic data for the entire participant sample of 26,148 persons--all enrollees and anyone ever considered for enrollment in the HIE.¹

The full sample demographic file consists of variables derived from administrative data maintained at Rand to keep track of participants over the course of the experiment. For each variable in the file, this codebook lists the data sources, defines all response codes, and tabulates the response frequencies. The codebook is thus a basic reference for file users. The full sample demographic file and its codebook supersede all previously issued demographic information about the HIE participant sample.

Arleen Leibowitz, Susan Marquis, and William Rogers defined most of the variables. Chih-Ming Fan, Christe McMenomy, and Lawrence Painter provided programming support; Betty Amo provided administrative support. Martha A. Bedell, Jacqueline M. McGee, and Elizabeth M. Sloss reviewed the draft codebook and made useful suggestions. Joice Polin prepared numerous typescripts. Final production of this Note was supervised by Patricia Bedrosian. Finally, we thank Joseph Newhouse for his guidance and support.

¹Volume 1 in the series provides data on eligibility status and family composition for 9142 enrollees throughout their period of participation. It has been published as S. M. Polich and C. d'Arc Taylor, *Master Sample Series, Vol. 1: Codebook for Eligibility-Family Changes File*, The Rand Corporation, N-2264/1-HHS, May 1986. Volume 3, in preparation, will provide data for certain subsets of the full participant sample.

I. INTRODUCTION

This section presents an overview of the Health Insurance Experiment (HIE) and its data collection and file development efforts. It provides essential background for understanding the contents of this codebook. Section II describes the distinctive features of the master sample series of files and the full sample demographic file addressed here. The full sample demographic file is so called because it provides demographic data for all 26,148 participants in the experiment. Section III presents the codebook for the variables in the file.

EXPERIMENTAL DESIGN

The Rand Corporation conducted the HIE from 1974 to 1982 in six sites across the United States: Dayton, Ohio; Seattle, Washington; Fitchburg and Franklin County, Massachusetts; and Charleston and Georgetown County, South Carolina.¹ The main purpose of the experiment was to assess how varying patients' cost of health services affected their use of services, their satisfaction with health care, the quality of their care, and the state of their health. A related purpose was to study how those outcomes were affected by the mode of delivery--fee for service or health maintenance organization (HMO).²

Over the course of the experiment, information of some kind was obtained for 26,148 persons. A total of 24,340 persons were administered a baseline interview (*baseline participants*³), of which

¹The sites were chosen to represent the four census regions of the country and both urban and rural areas. They also differed in the amount of delay to obtain an appointment, reflecting different degrees of stress on the ambulatory medical care system. Site selection is described in Philip J. Held, *Site Selection Criteria for the Health Insurance Study*, The Rand Corporation, N-2266-HHS, May 1985.

²For a discussion of the purposes and design of the HIE, see Joseph P. Newhouse, "A Design for a Health Insurance Experiment," *Inquiry*, Vol. 11, 1974, pp. 5-27. HIE is also called HIS, Health Insurance Study. The terms are synonymous.

³This and other distinctive HIE terms are defined in the Glossary at the end of this document.

7,700 were ultimately enrolled.⁴ An additional 554 persons were enrolled later, all but a few of them newborns or adopted children under one year of age. Those 8,254 *insured enrollees* were assigned to an *experimental insurance treatment*, and data on their use of health services were collected throughout their period of participation.⁵ Another 2,483 *adjunct enrollees* were not assigned to an insurance treatment but resided with insured enrollees or were members of a short-lived control group in Dayton. The sample of persons in the full-sample demographic file is described in detail in Sec. II.

Selection of Enrollees

Persons offered enrollment in the experiment represent a random sample from each site, subject to certain eligibility restrictions.⁶ They were chosen by a two-stage baseline selection process. In each site an areawide probability sample of dwelling units was drawn. Their occupants were interviewed for eligibility, and those found eligible were questioned in depth about their socioeconomic characteristics and experience with health care (baseline interview).

Eligibility criteria excluded those whose health care delivery systems differed from options available to the general population. The following groups were excluded:

- Those who were eligible for Medicare or would become so during the experiment, i.e., those 62 years of age and older, or younger than 62 but with a Medicare-eligible condition such as end-stage renal disease.

⁴Of the remaining 16,640 people, the 15,411 persons who did not enroll are called *baseline-only participants*; the other 1,229 are part of the adjunct enrollee group described below.

⁵Note that "insured" in HIE terminology means only "assigned to an experimental treatment." By the same token, "uninsured" applies only to a participant not so assigned, not necessarily someone lacking health insurance altogether.

⁶Subject also to slight oversampling of low-income families in Dayton, Massachusetts, and South Carolina.

- Those with family incomes over \$25,000 (1973 dollars).
- Those institutionalized (jail, long-term hospital).
- Veterans with service-connected disabilities.
- Those in the military and their dependents.⁷

Project staff verified the accuracy of the information given by baseline participants with employers and insurance companies.

In the second selection stage, HIE staff drew a representative sample of eligible persons to be offered enrollment and assigned each family to one of the insurance plans described below. A sophisticated technique assured that, across plans, families closely resembled each other in 24 health and socioeconomic characteristics.⁸

Experimental Treatments

Sixteen experimental treatments distinguished among coinsurance rates, delivery systems, and maximum out-of-pocket expenditures. All but one of the treatments were health insurance plans, listed below as A-0. Enrollees who had gone through the baseline selection process were assigned to one of the plans. The remaining treatment involved a control group in Seattle, chosen separately.

Insurance Plans. Plans A-N entailed different degrees of cost sharing under the fee-for-service system. Within each cost-sharing group, listed below, plans also differed by the ceiling placed on maximum expenditure. Plan O involved participation in a prepaid group practice, a traditional type of HMO:

⁷Details of HIE eligibility requirements are in Lorraine Clasquin and Marie E. Brown, *Rules of Operation for the Rand Health Insurance Study*, The Rand Corporation, R-1602-HEW, May 1977, Sec. II.

⁸The logic and techniques used to determine optimal sample sizes and assign individual families to experimental plans are described in Carl N. Morris, "A Finite Selection Model for Experimental Design of the Health Insurance Study," *Journal of Econometrics*, Vol. 11, 1979, pp. 43-61.

- A. Free care (0% coinsurance) (one plan).
- B-D. Family pays 25% of its medical bills (25% coinsurance) (three plans).
- E-G. 50% coinsurance (three plans).
- H-J. 50% coinsurance for dental and outpatient mental health services and 25% coinsurance for all other services (three plans).
- K-M. 95% coinsurance (three plans).
- N. 95% coinsurance on outpatient services; 0% on hospital care (one plan).⁹
- O. 0% coinsurance if care was received at a Seattle HMO, Group Health Cooperative of Puget Sound; 95% coinsurance if care was received outside the HMO (one plan).

Plans requiring coinsurance (B-N) placed a ceiling on annual out-of-pocket expenditures, above which care was free.¹⁰ In all but one plan (N), the ceiling was a specified percentage of the family's income or a dollar limit, whichever was less. The percentage varied with family income, and the dollar limit varied with the plan, as indicated below:

<i>Plan</i>	<i>Percentage of Family Income</i>	<i>Dollar Limit</i>
B-D	5, 10, or 15	1000/750 ¹¹
E-G	5, 10, or 15	1000

⁹During the experiment's first year in Dayton, the provisions of plans A-N differed in two ways: only plan A covered dental services for adults; and the coinsurance rate on plans K-N was 100 percent instead of 95 percent.

¹⁰During the experiment's first year in Dayton, expenditures for outpatient mental health care did not apply toward the ceiling.

¹¹In plans B-D and H-J the \$1000 limit applied during the first two years of enrollment for Dayton families who enrolled from November 1974 to February 1975; and during the first year of enrollment for Seattle families who enrolled from January to September 1976. The \$750 limit applied during subsequent enrollment years for the aforementioned families, and during the entire enrollment period for all other families.

H-J	5, 10, or 15	1000/750
K-M	5, 10, or 15	1000
N	--	150 per individual; 450 per family

HMO Control Group. A random sample of existing members of the Group Health Cooperative (subject to HIE eligibility requirements) was drawn as a control group for the HMO experimental group assigned to plan O. The control group was formed to compare HMO use by those who had chosen that delivery mode (i.e., members of the control group) with use by those experimentally transferred to an HMO from the fee-for-service system (i.e., members of the experimental group). Enrollees in the HMO control group continued with the Group Health Cooperative under their prior arrangements but provided the same data as HMO experimental members.

Services Provided

Plans A-O provided the same comprehensive benefits, including hospital, physician, dental, mental health, vision, and auditory services, drugs (including over-the-counter drugs for certain chronic conditions), and supplies. Services of nonphysician providers, such as audiologists, chiropractors, clinical psychologists, optometrists, physical therapists, and speech therapists, were also covered. The only noteworthy exclusions were nonpreventive orthodontic services, cosmetic surgery for preexisting conditions, and outpatient mental health visits exceeding 52 per year.

Enrollees were able to choose the physicians and other persons who provided their health care. However, if those in the HMO experimental group sought care outside the HMO that was available within, they were responsible for 95 percent of the cost. (For covered services, such as dental or chiropractic, that were unavailable at the HMO, members of the experimental HMO group were fully reimbursed.)

Enrollees in the HMO control group retained whatever benefit package they or their employer had purchased from the HMO. Members of both control and experimental groups were reimbursed 5 percent of the

cost of care obtained outside the HMO to encourage the reporting of non-HMO care.

Terms of Enrollment

Families who accepted the insurance plan offered from plans A-O were enrolled in the experiment for either three or five years, the term randomly assigned. All members of the HMO control group were enrolled for 5 years.

Enrollees assigned any benefits from their existing health insurance policies to the HIE during the time they participated. No family was financially penalized by HIE enrollment. Enrollees were reimbursed for the cost of maintaining their policies, and if their HIE plan could, under any conceivable set of circumstances, provide less coverage than their private policies, they were paid the maximum difference.¹²

Table 1 indicates the timing of enrollment in the experiment and number of enrollees insured immediately after the baseline selection process in each site.

DATA COLLECTION

Over the course of the experiment, extensive data were collected on participants' demographic and economic characteristics, health status, and use of health services. Background information was obtained on local health care costs, providers, and types of services rendered. The data collection instruments are described in Table 2.

Table 2 shows the amount and types of data gathered from the various participant groups. The most extensive data, especially longitudinal data on the use of health services, are available from the 8,254 insured enrollees, who participated in the experiment longest. The 15,411 baseline-only participants provided much demographic and socioeconomic data, as well as information on health status, experience with health care, and health-related attitudes. Limited data were obtained for the 2,483 adjunct enrollees.

¹²Calculation of the maximum difference is described in Appendix A.

Table 1
HIE ENROLLMENT PERIODS

Site	Number of Enrollees ¹	1974	1975	1976	1977	1978	1979	1980	1981	1982
Dayton	1137	Nov.								Feb.

5-year	176									
Franklin Co.	889		July							Oct.
3-year	649									Oct.
5-year	240									
Charleston	779		Nov.							Feb.
3-year ²	571									
5-year	208									
Georgetown Co.	1060		Nov.							Feb.
3-year ³	800									
5-year	260									
Total	7700									

NOTE: Timelines mark the month and year in which the first person enrolled in the experiment and the month and year in which the last person left the experiment. Data on use of health services continued to be collected from several groups after the end dates shown here: one year afterward for the Dayton 5-year group and Seattle, Fitchburg, and Franklin County 3-year groups; six months afterward for the Dayton 3-year group.

¹Numbers refer to enrollees insured immediately after the baseline selection process. An additional 554 persons were enrolled and insured later, nearly all of them newborns or adopted children under 1 year of age. Figures for Seattle include the HMO control group.

²Some of these enrollees were also members of a preenrollment group between November 1976 and February 1979. An additional 339 persons participated in the preenrollment phase but did not formally enroll in the experiment.

³Some of these enrollees were also members of a preenrollment group between November 1976 and February 1979. An additional 213 persons participated in the preenrollment phase but did not formally enroll in the experiment.

Table 2
PRINCIPAL HIE DATA COLLECTION INSTRUMENTS

Instrument	Topics Covered	Data Collected		
		How	When	From
1. Screening questionnaire [1]	Demographic information to establish basic eligibility	Interview	Beginning of HIE operation in site	Occupants of representative sample of dwelling units on geographic clusters in site
2. Baseline questionnaire	Income, employment Family composition	Interview	4-6 months before enrollment	Baseline participants
	Health status Health care experience and insurance coverage Satisfaction with medical care	Self-administered	4-6 months before enrollment	Baseline participants
3. Enrollment verification form	Changes in family composition, economics, or insurance coverage since baseline questionnaire	Interview	Between administration of baseline questionnaire and enrollment date	Baseline participants determined eligible
4. Medical history questionnaire (MHQ), 3 versions by age group: 0-4 years 5-13 years 14+ years	Form A: health status, attitudes, habits Form B: specific medical disorders	Administered by self or parent [2]	Just before enrollment and exit [3]	Insured enrollees
5. Medical screening examination, 3 versions by age group: 0-2 years 3-13 years 14+ years	Physiologic tests	Paramedical personnel	Just before enrollment and exit	Sample of insured enrollees at enrollment; all existing enrollees
6. Health report	Use of medical or dental services and time spent obtaining them; any restricted activity or bed disability	Administered by self or parent	Biweekly during period of participation	Insured enrollees [4]
7. Health care questionnaire, 3 versions by age group: 0-4 years 5-13 years 14+ years	Health status, attitudes, habits (subset of MHQ)	Administered by self or parent	Each anniversary of enrollment except at exit	Insured enrollees

For footnotes, see p. 10.

Table 2 (cont.)

Instrument	Topics Covered	Data Collected		
		How	When	From
8. Annual income report	Amount and sources of family income, taxes paid	Self-administered	Annually (April)	Head of insured family
9. Periodic employment report	Wages, hours worked, family payments for care of children or elderly, government program benefits received	Self-administered	Semiannually	Enrollees (head and family members 16 and older)
10. Assets and debts questionnaire	Family assets and liabilities	Self-administered	Exit	Head of insured family
11. Knowledge of coverage questionnaire	Details of HIE insurance plan	Self-administered	Specified intervals [5]	Insured enrollees
12. Insurance abstraction	Details of selected insurance policies	Abstraction	At time of knowledge of coverage questionnaire	Insurance company brochures
13. Chronic condition questionnaire	Status of condition, correctness of diagnosis, adequacy of treatment	Physician interview	At exit medical screening examination	Sample of insured enrollees found to have certain chronic conditions [6]
14. Evaluation questionnaire	Perceptions and attitudes about HIE and health care system	Self-administered	Exit	Head of insured family
15. Health notice	Use of medical or dental services	Administered by self or parent	Biweekly during preenrollment phase (South Carolina); 6 months-1 year after exit (other sites)	Preenrollees (So. Carolina), insured enrollees who have exited (other sites)
16. Medical expense report (MER)--fee-for-service claim form, 4 types: Doctors' services and supplies Dental care Hospital and extended care Pharmacy	Each use of medical or dental service, drugs, and equipment; reason or diagnosis; treatment	Administered by self or parent	Time of occurrence	Insured enrollees and providers/suppliers

For footnotes, see p. 10.

Table 2 (cont.)

Instrument	Topics Covered	Data Collected		
		How	When	From
17. Services rendered report (SERR)--HMO equivalent of MER [7], 2 types: Doctors' services and supplies Hospital and extended care	Each use of medical service provided by HMO; reason or diagnosis; treatment	Abstraction	Annually to cover entire previous year	HMO records for insured enrollees in HMO experimental and control groups
18. Factor price survey	Wages and benefits of selected hospital personnel [8], average daily inpatient population	Phone and mail	Semiannually	Sample of local hospitals
19. Consumer price index	Prices of selected nonmedical products in the six HIE sites	Phone and inspection	Semiannually	Sample of local retailers
20. Physician capacity utilization survey (PCUTS)	Availability of services [9]	Phone	Annually	Sample of local physicians [10]
21. Dentist capacity utilization survey (DCUTS)	Similar to PCUTS	Phone	Annually	Sample of local dentists [11]

- I
10-
1. Administered as a separate questionnaire only in Dayton; part of baseline questionnaire in the other sites.
 2. When "parent" appears in this column, a parent was asked to provide data for children 13 and younger.
 3. "Exit" refers to normal departure from the experiment after completing the assigned enrollment period, three or five years. Those who "attrited," or voluntarily left the experiment early, received an "attrition" MHQ that was identical to the exit MHQ.
 4. In the first year of the experiment in Dayton, the health report was administered weekly to a random half of Dayton enrollees. In the first year of the experiment in Massachusetts and South Carolina, 25 percent of enrollees were exempted to measure the reporting requirement's effect on the use of health services. Also at one point virtually all participants stopped filling out health reports, for budgetary reasons.
 5. Intended intervals were enrollment, 18 months, 3 years, and 5 years after enrollment (the last only for the 5-year participants). Actual mailings approximated those intervals in Massachusetts and South Carolina; the first mailing was 2-1/2 years and 1 year after enrollment in Dayton and Seattle, respectively.
 6. Hypertension, diabetes, thyroid diseases, chronic heart diseases, chronic lung diseases, joint diseases, ulcers, cerebrovascular disease.
 7. Pharmacy data were obtained directly from an HMO-supplied computer tape. Dental care was not available through the HMO; HMO participants reported claims for dental care and other non-HMO services on the MER.
 8. Categories of personnel: registered nurses (general-duty), medical technicians, licensed professional nurses, nursing aides, kitchen helpers, general stenographers, and maids or porters.
 9. Waiting time for appointments; appointments per hour; patients seen in office, home, and hospital; weekend office hours; office staffing; cost of office visit; whether new patients accepted.
 10. Physicians (M.D. or D.O.) specializing in general practice, internal medicine, and pediatrics.
 11. Except in Fitchburg, Franklin County, and Georgetown County, where all dentists were surveyed.

Several subcontractors to Rand participated in the data collection effort. Until March 1975, Mathematica, Inc., supervised data collection, administered the insurance plans, and processed claim forms. Thereafter, National Opinion Research Center managed data collection and Glen Slaughter and Associates handled insurance administration and claim processing. American Health Profiles, Inc., conducted the medical screening examinations at enrollment (October 1974 through January 1977); CompuHealth administered those examinations at exit (October 1977 through December 1981).

FILE DEVELOPMENT

Subcontractors sent the collected data to Rand, either in hardcopy form or as cleaned data tapes. At Rand the hardcopy data were encoded for machine readability and subjected to computerized checks for logical consistency and adherence to specified response ranges; outliers were checked only for fidelity to the original response and otherwise left unchanged. Limited cross-checking was done to assess logical consistency among a respondent's answers. All identifiers permitting information to be linked to a specific respondent were replaced twice to protect respondents' privacy.¹³ The cleaned records were then arranged in the HIE version of standard computer file format, and the resulting files of *primary variables* made available for HIE analyses.

When an analyst needed information that required manipulation of primary data, *derived variables* were constructed. The analyst and a programmer determined a suitable way of obtaining the information by extracting, aggregating, or transforming primary data, and the programmer wrote the appropriate logic. With the analyst's approval, the new variable was entered on the master file.

Both primary and derived variable files are being issued to the public in a number of topical series. Appendix B provides a complete list of the files to be issued.

¹³The first conversion was known only to the subcontractor, the second only to Rand. Neither institution could make the full link from the respondent's name to his or her identifier on the analytic files.

The machine-readable tape for each file includes data in both SAS¹⁴ (Statistical Analysis System) and character formats, and an index of character-format variables.¹⁵

A codebook is also provided for each file. This volume contains the codebook for a derived variable file in the *master sample series*. Section II describes the file and its place in the series; Sec. III presents the codebook.

¹⁴A registered trademark of the SAS Institute Inc.

¹⁵This is the content of all HIE files issued by Rand. Other institutions (e.g., National Archives) will distribute HIE files and may alter their contents.

II. FULL SAMPLE DEMOGRAPHIC FILE

The full sample demographic file is the second of three files in the master sample series, which contains the only demographic, eligibility, and family data for all participants in the experiment. Each file in the series treats a different part of the participant universe.

SERIES SAMPLE

Figure 1 depicts the two main samples and their components. The baseline sample (dashed border) contains all persons who were considered for HIE enrollment on the basis of information they gave in screening and baseline interviews. The enrolled sample (solid border) contains insured enrollees assigned to an experimental treatment and adjunct enrollees not so assigned.

The baseline-only part of the sample consists of persons who never enrolled. They were (1) determined ineligible, (2) found eligible but not offered enrollment, or (3) found eligible but refused enrollment.

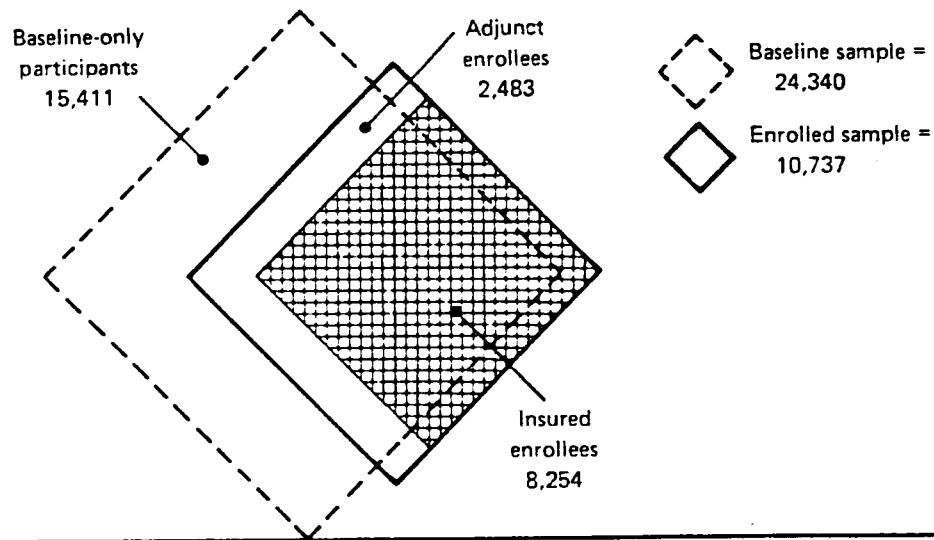

Fig. 1 -- Sample groups covered by the master sample series

The crosshatched area represents those who signed an enrollment contract and were *insured*, or assigned to an experimental treatment. As such, they provided longitudinal data on the use of health services. Adjunct enrollees were not assigned to an experimental treatment and provided no longitudinal data. About 25 percent of the adjunct enrollees (669) were members of a control group in Dayton that was discontinued after 15 months, as explained later in this section. The rest (1,814) resided with insured enrollees.¹ The portion of the crosshatched area extending beyond the dotted line represents insured and adjunct enrollees who joined the experiment after the baseline period.

In the master sample series of codebooks, Volume 1 focuses on the enrolled sample.² It shows eligibility status and family composition of insured enrollees from the time they enrolled until their participation ended. Since the period of enrollment could be as long as five years, an enrollee's family structure and ability to participate in the experiment could change during that time. Volume 1 presents data collected at various intervals to document those changes. It also provides limited data for 888 adjunct enrollees, excluding the Dayton control group and self-supporting adjunct enrollees. Volume 2, the present volume, provides demographic and socioeconomic data for both baseline and enrolled samples. Volume 3, in preparation, will provide supplemental data for certain subsets of the entire participant sample.

HIE files in the master sample series are the only sources of demographic and socioeconomic data on the participant sample. Those files and their associated codebooks supersede all previously issued sample data.

¹If financially dependent on the head of the insured family (or if a member of such a dependent person's family), the adjunct enrollee was called a *person of interest*. If self-supporting (or a member of such a person's family), he/she was called a *family of interest*.

²S. M. Polich and C. d'Arc Taylor, *Master Sample Series, Vol. 1: Codebook for Eligibility-Family Changes File*, The Rand Corporation, N-2264-HHS, May 1986.

FILE SAMPLE

Table 3 enumerates the sample covered in this codebook by site and sample group. For this purpose the two sites each in Massachusetts and South Carolina are considered one. The table alludes to special participant groups in Dayton, Seattle, and South Carolina.

The Dayton control group was chosen to indicate how the community's use of health services compared with use by our insured enrollees. Control families retained their own health insurance but completed the same questionnaires as insured families. The Dayton control group participated from November 1974 to February 1976; it was discontinued because complete claims data appeared unobtainable from its members. Unlike insured enrollees, Dayton control families had to file claims with both the HIE and their own insurance companies. HIE analysts used data from the Dayton control group only to scale measures of health status.

Table 3
SAMPLE COVERED IN FULL SAMPLE DEMOGRAPHIC FILE

Site	Baseline-Only Participants	Enrollees		
		Insured	Adjunct	Total
Dayton	2,845	1,208	968 ¹	5,021
Seattle	3,492	3,351 ²	761	7,604
Massachusetts	4,279	1,710	316	6,305
South Carolina	4,795 ³	1,985	438	7,218
Total	15,411	8,254	2,483	26,148

¹Includes 669 members of the Dayton control group.

²Includes 2,535 HIE-insured and 816 HMO-insured enrollees.

³Includes 552 members of the 3-year enrollee sample who participated only in the preenrollment phase.

In Sec. I we distinguished between the two insured enrollee groups in Seattle: HMO experimental and HMO control groups. Because members of the experimental group went through the HIE baseline selection process and were transferred to the HMO by the experiment, they are termed *HIE-insured* (as are insured enrollees assigned to the fee-for-service insurance treatments). The control group, chosen randomly from existing HMO members, is called *HMO-insured*. Because HMO-insured enrollees were not chosen by the unbiased selection model used to assign HIE-insured enrollees to an insurance plan, HMO-insured enrollees do not necessarily resemble HIE-insured enrollees in demographic characteristics. The HMO control group participated for the full 5-year enrollment term.

In every site except South Carolina the 3- and 5-year participants enrolled at the same time and exited two years apart. In South Carolina, the 3- and 5-year participants enrolled two years apart and exited at the same time. Although the 3-year and 5-year participants were chosen simultaneously, the 3-year group was not formally enrolled until the beginning of the third year of the experiment in South Carolina. During years 1 and 2, its members served as a preenrollment group (PEG); they were not assigned to an insurance plan but data were collected for them. The two preenrollment years are known as the PEG period. If a PEG family dropped out of the experiment during the PEG period, we consider it part of the baseline-only sample because the family did not formally enroll. Not all 3-year enrollees have PEG period data; some who refused preenrollment accepted formal enrollment two years later.

DATA SOURCES

Information in the full sample demographic file is drawn from two types of sources: data collection instruments completed by participants themselves and administrative files maintained by Rand or its subcontractors to keep track of participants over the course of the experiment.

The primary data collection instruments were the screening questionnaire, baseline questionnaire, and enrollment verification form (EVF), plus their associated supplements. They are described in Table 2 above, items 1 through 3. Income data are also taken from the annual income report, item 8 on Table 2.

During the baseline period and enrollment process, data collection instruments were administered in sequence. The screening questionnaire and baseline questionnaire were administered to everyone considered for enrollment. The EVF was administered to the subset of persons offered enrollment. The "new person" supplement to the EVF collected demographic and health-related data for persons who joined families offered enrollment after the baseline period.

Additionally, detailed information was collected about dental services and providers from the baseline dental supplement; medical visits, providers, and expenses from the baseline physician supplement; and wages from the EVF employment supplement. Filling out those supplements was triggered by a certain response in the main instrument. For example, "Yes, I have health insurance" in the baseline instrument led to the administration of an insurance supplement.

The same instrument differed in minor details from site to site. Each version bears a separate Health Insurance Experiment Instrument number. The instruments were also administered at different times in the different sites. For example, enrollment in Dayton began two years before enrollment in South Carolina (see Table 1). We attempt to compensate for the effects of such intersite differences in constructing the variables, as described in the codebook.

To provide complete information for all participants, whether present at baseline or added afterward, the screening, baseline, and enrollment verification instruments collected some of the same demographic data. Many variables use baseline data for participants present then and enrollment data for those added later. Other variables rely primarily on enrollment data and use baseline or screening data

only if enrollment data are lacking.³ For several of those variables the logical consistency between enrollment and baseline or screening values was checked and discrepancies resolved. Variables constructed exclusively from either baseline or enrollment data are so labeled.

The HIE administrative files used for demographic data include the document accountability file, sample file, sex/birth file, participant master file, master demographic file, and enrollment screening exam file. The administrative files will not be released to the public.

Data sources for each variable are identified in the codebook and are further described in Appendix C.

³In South Carolina, PEG members who formally enrolled completed two enrollment verification forms: one before signing a preenrollment agreement and another before formally enrolling two years later. Where there is a choice, the variable constructions use data from the "enrollment" rather than the "preenrollment" EVF.

III. THE CODEBOOK

VARIABLE DESCRIPTIONS

This codebook describes each variable in the full sample demographic file.¹ The format is illustrated in Fig. 2 for the variable WORRYBAS and is described below.

The box provides a basic description of the variable, including

- Variable name, the substantive abbreviation used by analysts.
- File name, in this case FSD, the acronym for "full sample demographic."
- Variable label, a capsule description.
- Response codes and their definitions or range of values.
- Prose definition.

Below the box appear essential explanatory notes if any.

The sources or input variables from which the derived variable is constructed are identified by site, administrative file name or HIEI number, and variable definition. Input variables may be other derived variables or primary variables (the latter denoted by the prefix DEI). Every DEI variable represents a question on a data collection instrument. The variable definition cites the question, including relevant instructions to the interviewer in capital letters (see the text of DEI2836 in Fig. 2).

The section called "Construction" describes how HIE programmers built the derived variable. The code conforms to SAS rules, including the convention that all values are initialized to "missing" and converted to valid responses only when specifically instructed. Explanatory comments are enclosed in parentheses to distinguish them from the executable part of the code.

¹A technical description of the file, including the location and length of each variable, is provided in Appendix D.

VARIABLE WORRYBAS

FSO

Worry about health

CODES

- . - Missing
- 1 - Great deal
- 2 - Some
- 3 - Hardly any
- 4 - None

WORRYBAS reports how much the participant worried about his or her health in the past year.

WORRYBAS

VALUE	FREQ	CUM FREQ	%	CUM %

THEN WORRYBAS = DE1357;
```

Fig. 2 -- Example of codebook format

At the right of the box for most variables is a table of response frequencies. The first column lists all response codes appearing for the variable. The second and third columns show, respectively, the absolute and cumulative response frequencies for each code. The fourth and fifth columns show the corresponding absolute and cumulative percentages. For continuous variables--for example, those pertaining to income--statistics such as the mean, median, and standard deviation are given instead of frequencies. The total number of observations (responses + nonresponses) is 26,148.

VARIABLE TYPES

Six *identifiers* precede the other variables on each record in the file. FILENAME denotes the present file. PERSON identifies each participant, permitting data to be merged for an individual across years and files. SITE and INSTAT (HIE insurance status) can be used to select analytic subsamples. The other identifiers indicate the participant's baseline family (BFAMILY) and household (BHH).

INSTAT distinguishes participants who were ever insured under the HIE (INSTAT = 1) from those never insured under the HIE (INSTAT = 3). It also identifies members of the HMO control group (INSTAT = 2), who retained their HMO insurance, in contrast to the HMO experimental group, which was insured under the HIE. "Never insured" participants include the baseline-only sample and adjunct enrollees.

Enrollment-related variables identify baseline families and households, family head at enrollment, and conditions of enrollment such as the assigned insurance plan and enrollment date and term.

Demographic variables describe participants by age, sex, race, marital status, education, occupation, wage, and income. *Health-related* variables indicate attitudes, health insurance status, receipt of welfare or other public assistance, presence of a regular medical or dental health care provider, and the previous year's medical and dental expenses.

The amount of data for participants on this file depends on their category and how long they were associated with the experiment. Insured enrollees, members of the Dayton control group, and persons of interest

who were in the family at the time of the baseline interview but were never insured have full data. Baseline-only participants have demographic and health-related data but lack most of the enrollment-related variables. Persons of interest who joined the family just before enrollment have only enough data needed to judge their eligibility. Persons of interest cannot be identified from data in this file; for that purpose it is necessary to use the eligibility-family changes file. For families of interest, only basic identification data were collected. Being self-supporting, families of interest are unimportant in economic analyses because they did not contribute to or use the income pool from which insured families paid for health care.

MISSING VALUES

Missing data are represented by the SAS dot ". ". Understanding which participant groups have missing values often requires studying the construction. There are basically two kinds of missing values:

- "True" missing values occur when a person should have data but does not. The discrepancy can occur for several reasons: The question was left off the survey by mistake; the person was asked the question but did not answer; or the person answered two or more related questions and gave conflicting answers. Also, some data come from the baseline questionnaire, which was administered to everyone considered for enrollment, and other data come from the EVF, which was administered to a subset of the baseline sample. Note that the same variable can come from the baseline questionnaire in one site and the EVF in other sites.
- "Not applicable" values occur when a person was not asked a question intentionally. For example, income and employment questions were not asked of persons under 16 years of age.

Conversely, some people who should have "not applicable" values were asked the questions and do have data. For example, a few children under 16 were asked the income and employment questions. Their values have been left on the file so the user can decide how to handle them.

For each variable, we have indicated next to the "." which groups of people have missing values. For reasons explained above, some of the persons in these groups do have data. The user must decide what to do with them.

CODEBOOK USE

Because it contains complete variable descriptions, this codebook is a basic reference for users of the full sample demographic file. As the only HIE file containing demographic data, this file is also necessary to use in selecting subsamples for analyses of substantive data in other HIE files.

FULL SAMPLE DEMOGRAPHIC FILE

VARIABLE FILENAME

FSD; HEADER

Name of file

FILENAME is a unique 6-character code that identifies
this file as DSFOAA.

VARIABLE PERSON

FSD; HEADER

Person identifier

PERSON is an 8-character alphanumeric code that uniquely
identifies each person for whom the HIE collected data.
The 2nd character designates the site in which the person
resided at baseline/enrollment: A=Dayton, B=Seattle,
E=Fitchburg, F=Franklin County, G=Charleston, H=Georgetown
County.

FILENAME	VALUE	FREQ	CUM FREQ	%	CUM %
DSFOAA	26148	26148	100.00	100.00	

VARIABLE	SITE	FSD; HEADER
Site		
CODES		
1 - Dayton, Ohio 2 - Seattle, Washington 3 - Fitchburg, Massachusetts 4 - Franklin County, Massachusetts 5 - Charleston, South Carolina 6 - Georgetown County, South Carolina		
SITE identifies the participant's place of residence when the baseline instrument was administered.		

SITE	VALUE	FREQ	CUM FREQ	%	CUM %
	1	5021	5021	19.20	19.20
	2	7604	12625	29.08	48.28
	3	2885	15510	11.03	59.32
	4	3420	18930	13.08	72.40
	5	3587	22517	13.72	86.11
	6	3631	26148	13.89	100.00

VARIABLE	INSTAT	FSD; HEADER
Insurance status		
CODES		
1 - Ever HIE-insured 2 - Ever HMO-insured 3 - Never insured		
INSTAT describes the participant's insurance status in the Health Insurance Experiment.		

INSTAT	VALUE	FREQ	CUM FREQ	%	CUM %
	1	7438	7438	28.45	28.45
	2	816	8254	3.12	31.57
	3	17894	26148	68.43	100.00

SOURCE: Document accountability file

VARIABLE BFAMILY

FSD; HEADER

Baseline family identifier

CODES

blank - Missing

BFAMILY is an 8-character alphanumeric code that uniquely identifies a family in which one or more persons were screened for enrollment. All persons in the family at baseline received this identifier.

VARIABLE BHH

FSD; HEADER

Baseline household identifier

CODES

blank - Missing

BHH is an 8-character alphanumeric code that uniquely identifies a household in which one or more families were screened for enrollment. All persons in the household at baseline received this identifier.

VARIABLE XPERSON

FSD; HEADER

Head of enrollment family identifier

CODES

blank - Missing or not enrolled

XPERSON identifies the head of the family at enrollment-- female head if present. If no head is present (rare), the oldest child of the family is designated XPERSON. The identifier is the same 8-character alphanumeric code as in variable PERSON.

VARIABLE BASELD

FSD

Baseline date

RANGE

. - Missing or participant joined experiment after
baseline period
19740610 to 19761215

BASELD identifies the date on which baseline instruments were administered to the participant (YYYYMMDD).

VARIABLE ENRDATE (cont.)

VARIABLE ANND

Anniversary date

CODES

- . - Missing, person of interest, or never enrolled
- 0101 - Dayton, Seattle, Charleston, Georgetown
- 0131 - Charleston, Georgetown
- 0201 - Dayton, Seattle, Charleston, Georgetown
- 0301 - Seattle
- 0401 - Seattle
- 0501 - Seattle
- 0601 - Seattle
- 0701 - Seattle, Fitchburg, Franklin
- 0801 - Seattle, Fitchburg, Franklin
- 0901 - Seattle, Fitchburg, Franklin
- 1001 - Fitchburg, Franklin
- 1101 - Dayton, Charleston, Georgetown
- 1201 - Dayton, Charleston, Georgetown
- 1231 - Charleston, Georgetown

ANND identifies the month and day (MMDD) on which a new contract year began for an enrolled family each year during its term of participation. For families ever insured, ANND derives from the effective date of coverage (same as ENRDATE). For members of the Dayton control group and South Carolina preenrollment group, ANND derives from the date their participation began.

VARIABLE PLAN (cont.)

- 8 - Participant pays 50% of covered services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 5% of family income or \$1000, whichever is less.
- 9 - Participant pays 50% of covered services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 10% of family income or \$1000, whichever is less.
- 10 - Participant pays 50% of covered services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 15% of family income or \$1000, whichever is less.
- 11 - Participant pays nothing out-of-pocket for covered services.
- 13 - Participant pays nothing out-of-pocket for covered inpatient services but pays 95% of covered outpatient services until deductible is met. Then plan pays 100%. Deductible is \$150 per person or \$450 per family.
- 14 - Participant pays 95% of covered services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 5% of family income or \$1000, whichever is less.
- 15 - Participant pays 95% of covered services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 10% of family income or \$1000, whichever is less.
- 16 - Participant pays 95% of covered services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 15% of family income or \$1000, whichever is less.
- 17 - Participant pays 25% of covered medical services and 50% of dental and outpatient psychiatric services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 5% of family income or \$1000 (\$750#), whichever is less.

(cont.)

VARIABLE PLAN (cont.)

- 18 - Participant pays 25% of covered medical services and 50% of dental and outpatient psychiatric services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 10% of family income or \$1000 (\$750#), whichever is less.
- 19 - Participant pays 25% of covered medical services and 50% of dental and outpatient psychiatric services until maximum is spent, then plan pays 100%. Maximum out-of-pocket expenditure is 15% of family income or \$1000 (\$750#), whichever is less.
- 30 - Member of HMO experimental group (families randomly assigned to the HMO as part of the experiment).
- 97 - Never insured through the HIE--participant in PEG period only
- 98 - Member of HMO control group (families in the HMO before the experiment).
- 99 - Never insured through the HIE--member of Dayton control group.

\$1000 in the early site-years (see footnote 11, p. 4).

PLAN identifies the insurance plan or experimental treatment to which participant was assigned at enrollment. For most participants, PLAN is that assigned when the family enrolled. However, if the family's plan changed and the participant was enrolled afterward (e.g., as a newborn), PLAN is the new plan.

SOURCE: Document accountability file

VARIABLE MDEOFF

FSD

Maximum dollar expenditure assigned at enrollment

CODES

- . - MDE missing or not assigned (includes plan 30)
- 0 - assigned to plan 11, or no income
- Dollar amount

MDEOFF indicates the maximum annual amount the enrollee's family would have to pay out-of-pocket before health care was free under the HIE. That "maximum dollar expenditure" (MDE) was a function of the family's assigned HIE insurance plan. For most plans (see variable PLAN), MDE was a specified portion of family income (5, 10, or 15%) up to \$1,000 or \$750, depending on the site-year. For plans 1 and 13, the maximum was \$150 per person or \$450 per family. For plan 11, the maximum was \$0.

SOURCE: Participant master file

VARIABLE PIOFF

FSD

Participation incentive offered at enrollment

CODES

- . - PI missing or not HIE-insured
- 0 - not offered
- Dollar amount

PIOFF indicates the amount offered the enrollee's family as a participation incentive during the first year of enrollment. Appendix A defines participation incentive payments.

VARIABLE	TINC	FSD
Log of family income		
CODES		
. - Missing or never HIE-insured		
Log of dollar amount		
TINC is a transformation of average annual family income (in 1973 dollars) for the two years preceding enrollment. Raw values are adjusted for family size and for cost-of- living differences across sites, and \$1000 is added before the log is taken. Predicted values are substituted for missing values. TINC is calculated for HIE-insured families only.		

INPUT VARIABLES (all sites)

Source		Variable
Full sample demographic file	INCOME1	Income for year preceding enrollment
	INCOME2	Income for second year preceding enrollment
	AGE	Participant's age
	TINCCAT	Source of TINC value

IF INCOME1 \= . AND INCOME2 = . THEN INCOME = INCOME1;
IF INCOME1 \= . AND INCOME2 \= .
THEN INCOME = (INCOME1 + INCOME2)/2;
IF INCOME \= .
THEN DO;
    IF SITE = 1 THEN USSTDINC = INCOME*9761/9139;
    IF SITE = 2 THEN USSTDINC = INCOME*9761/10072;
    IF SITE = 3 | SITE = 4
        THEN USSTDINC = INCOME*9761/10904;
    IF SITE = 5 | SITE = 6
        THEN USSTDINC = INCOME*9761/((9151+9258)/2);
    TINC = LOG (( MAX (USSTDINC,0) + 1000) / FSIF);
END;
```

##FSIF factors to adjust income for family size were developed by Rand analysts on the theory that operating a larger household entails an economy of scale. The factor for operating any household is .37, to which the following are added, as applicable: .18 for each adult (over 18 years old); .15 for the first child (under 18); .12 for the second child; and .10 for the third and any subsequent child. TINC normalizes income to that of a family of four, two adults and two children. Use of FSIF therefore inflates the income of families smaller than four and deflates the income of families larger than four.

##USSTDINC factors to adjust for site differences represent the annual budget of a 4-person family at an intermediate standard of living in autumn 1973. The dividend, 9761, is the average for all urban U.S. families. The divisors reflect amounts in or optimally near the HIE sites: 9139 (Dayton, Ohio), 10,072 (Seattle-Everett, Washington), 10,904 (Hartford, Connecticut), 9151 (Atlanta, Georgia), and 9258 (Durham, North Carolina). All figures are from U.S. Department of Labor, Bureau of Labor Statistics, "Handbook of Labor Statistics 1975--Reference Edition," Washington, D.C., 1975, Table 142.

(cont.)

VARIABLE TINC (cont.)

CONSTRUCTION (cont.)

Step 2 - Calculate income from the annual income report; adjust for site and family size.

(Dayton, 1974 AIR)

INC = (TAXINC + NONTAX) * (9761/9139);

(Seattle, 1975 AIR)

INC = (TAXINC + NONTAX) * (9761/10072);

(Massachusetts, 1976 AIR)

INC = (TAXINC + NONTAX) * (9761/10904);

(South Carolina 3-year enrollees, 1978 AIR)

INC = (170.5/195.4) * (TAXINC + NONTAX) * (9761 / ((9151 + 9254)/2));

(South Carolina 5-year enrollees, 1976 AIR)

INC = (TAXINC + NONTAX) * (9761 / ((9151 + 9254)/2));

(All sites)

TINCA = LOG((MAX(INC,0) + 1000) / FSIF);

Step 3 - Calculate derived variables needed for regressions.

TIRS = LOG(IRS + 100);

IF INC = 0 THEN NOINC = 1;
ELSE IF INC > 0 THEN NOINC = 0;

IF IRS = 0 THEN NOIIRS = 1;
ELSE IF IRS > 0 THEN NOIIRS = 0;

TINCASQ = TINCA * TINCA;

TIRSSQ = TIRS * TIRS;

Step 4 - Run regressions shown below to predict TINC for every person

(Dayton)

TINCP = C1 + C2 * TINCA + C3 * NOINC;
TIRSP = C1 + C2 * TIRS + C3 * FAMCHG + C4 * NOIIRS;
TEDCP = C1 + C2 * EDUCDEC + C3 * AGE;

(cont.)

VARIABLE TINC (cont.)

CONSTRUCTION (cont.)

(Seattle and Massachusetts)

```
TINCP = C1 + C2 * TINCA + C3 * TINCASQ + C4 * NOINC;
TIRSP = C1 + C2 * TIRES + C3 * TIRSSQ + C4 * FAMCHG + C5 * NOIRS;
TEDCP = C1 + C2 * EDUCDEC + C3 * AGE;
```

(South Carolina 3-year enrollees)

```
TINCP = C1 + C2 * TINCA + C3 * NOINC;
TIRSP = C1 + C2 * TIRES + C3 * FAMCHG + C4 * NOIRS;
TEDCP = C1 + C2 * EDUCDEC + C3 * AGE;
```

(South Carolina 5-year enrollees)

```
TINCP = C1 + C2 * TINCA + C3 * TINCASQ + C4 * NOINC;
TIRSP = C1 + C2 * TIRES + C3 * TIRSSQ + C4 * FAMCHG + C5 * NOIRS;
TEDCP = C1 + C2 * EDUCDEC + C3 * AGE;
```

Step 5 - For members of HIE-insured families, if TINC is missing from INCOME1 and INCOME2 (step 1), substitute the predicted values from TINCP, TIRSP, TEDCP, or MEANTINC (step 4) in that order.

```
TINCCAT = 1;
IF TINC = .
  THEN DO;
    IF TINCP \= .
      THEN DO;
        TINC = TINCP;
        TINCCAT = 2;
        END;
      ELSE IF TIRSP \= .
        THEN DO;
          TINC = TIRSP;
          TINCCAT = 3;
          END;
      ELSE IF TEDCP \= .
        THEN DO;
          TINC = TEDCP;
          TINCCAT = 4;
          END;
      ELSE DO;
        TINC = MEANTINC;
        TINCCAT = 5;
        END;
    END;
```

INSURED indicates whether a family member had health insurance of any kind.

NOTE: Due to a programming error, Dayton baseline-only participants who had no health insurance were coded as having health insurance.

(cont..)

VARIABLE INSURED (cont.)

INPUT VARIABLES	SITE	HIEI	VARIABLES
	Dayton Seattle Massachusetts South Carolina	9,15/43,39 63 92 147	DEI1245 (Dayton) Does anyone have health insurance through a school or other organization? (NonDayton) Do you (or anyone in your family unit) have health insurance through a school, professional organization, or any other group?
			1. Yes 2. No
			DEI1049 (Dayton) Does he have health insurance through his employer?
			1. Yes 2. No
			DEI1050 (Dayton) Does he have any (other) health insurance, through a private agent or other source?
			1. Yes 2. No
			DEI1220 (NonDayton) RECORD TOTAL NUMBER OF SUPPLEMENTS TO BE COMPLETED. THE NUMBER OF SUPPLEMENTS YOU HAVE PREPARED SHOULD EQUAL THIS TOTAL.
			DEI12305 (Dayton) (In addition to any policies already mentioned) Does anyone have any policies or plans that are purchased from a private source, such as an insurance company, agent, salesman or by mail? Here is a list of some private insurance companies which offer medical insurance in (Ohio). (NonDayton) (in addition to that policy/those policies) Do you have any policies or (cont.)

VARIABLE INSURED (cont.)
INPUT VARIABLES (cont.)

plans that are purchased from a private source, such as an insurance company, agent, salesman or by mail?

1. Yes

2. No

(Dayton) CIRCLE ONE:

1) Family unit has no insurance; 2) Family unit has some insurance.

(Dayton) (In addition) are there any (other) health insurance policies covering any of the members of your family unit? For instance, policies which are held by someone outside the family unit?

(NonDayton) (Other than the policy(ies) you've told me about) Are there any members of this family unit covered by a health insurance policy held by someone outside the family unit or outside the household, for example, a child's insurance being paid by a relative who does not live here?

1. Yes

2. No

(NonDayton) Sometimes people have special insurance policies which pay cash directly to the beneficiary for days spent in the hospital. This kind of policy is called a hospital indemnity or extra cash policy. (Outside of the policy(ies) you've already told me about) Do you (or anyone in your family (cont.)

VARIABLE INSURED (cont.)
INPUT VARIABLES (cont.)

unit) have a hospital indemnity or extra cash policy?

1. Yes

2. No

(NonDayton) (Other than what you have already told me about) Are you (or is anyone in your family unit) covered by any of the special plans which are listed on this card?

1. Yes

2. No

(NonDayton) Some people participate in prepaid health maintenance or group practice plans, which provide health care in a clinic setting. By that, I mean a group of doctors to whom one can go for regular check ups as well as for treatment. These plans sometimes are provided by an employer, union, or some other group, or sometimes one can join as an individual (other than the policy(ies) you have mentioned) Are you (or anyone in your family unit) participating in such a plan?

1. Yes

2. No

(Seattle) Do you (or anyone in your family unit) expect to get any (other) health insurance policies within the next 6 months?

1. Yes

2. No

CONSTRUCTION

(Dayton)

(For persons present at baseline, MDVIS is constructed by summing
the number of visits made by the participant. Responses to
the baseline questionnaire indicated how many health care
providers the participant saw. For each provider, a baseline
physician care supplement was completed specifying the number of
visits. MDVIS is the sum of visits recorded on those supplements.
If the number of supplements indicated differed from the number
of supplements found, MDVIS was coded missing because of
conflicting data.)

INTRODUCTION TO DENTAL VARIABLES

CLASS 1: DDSUUAL AND DDSIND

The nine variables pertaining to participants' dental care and expenses are complex. This introduction is intended to clarify them by highlighting their similarities and differences. Several sources were used in deriving the dental data: (1) the baseline questionnaire and its dental supplements, (2) the EVF new person supplement, and (3) other derived variables in this file. Recall that supplements were completed to provide further detail for topics addressed in the main instrument. For example, if a participant reported a visit to the dentist in the baseline questionnaire, the baseline dental supplement was completed to elaborate on the providers and the services they rendered. If a participant had multiple providers and services, multiple supplements were completed. In the construction of each variable, the number of supplements to be completed (as reported in the baseline questionnaire) was compared with the number of supplements actually completed. If there was a discrepancy, the variable value was coded "missing" for the participant.

Data sources with HIEI numbers are identified in the variable descriptions, and the HIEI numbers are defined in Appendix C. Specific data items within those sources are defined by DEI number or variable name in the list of input variables at the end of this introduction.

The dental variables divide into three classes based on common data sources and similarity of construction. Each class is described below. The order of variables by class, which points up construction similarities of particular interest to programmers, differs somewhat from the order of the variable descriptions, which is for analytic convenience.

These straightforward variables identify the participant's regular dentist (DDSUUAL) and indicate whether the participant had multiple regular dentists (DDSIND) at baseline. If multiple dentists are cited, the first mentioned is assigned for the DDSUUAL value. Both variables are constructed by checking all baseline dental supplements completed for the participant. There are no site differences in the method of construction except that Dayton data were unavailable for DDSUUAL.

CLASS 2: HAVEDDS1-HAVEDDS3

These three variables indicate whether the participant visited a dentist for routine services (HAVEDDS1), for defined "special" services (HAVEDDS2), or for orthodontia (HAVEDDS3) during the previous year.

For persons present at baseline, each variable is constructed by first checking the responses to four "trigger" questions in the baseline instrument about whether the participant had dental visits or services (DEI1482 - DEI1485). Unless all four questions were answered "No," the participant's baseline dental supplements were then checked to see if the relevant services were provided.

For persons not present at baseline, these variables are constructed similarly, using the EVF new person supplement, which contained both trigger questions and details about relevant services. The exception is Dayton, which had two EVF new person supplements--a basic form containing the trigger questions and a dental supplement detailing the services. Through an administrative error, however, the new person dental supplement data were never processed. Therefore, all Dayton participants who did not answer No to the four trigger questions have values of "missing" for these variables.

CLASS 3: DDSVSP, DDSVIS, DDSEXP, DDSORTV

Three of these variables count the number of visits by the participant for special dental services (DDSVSP), for routine and special services (DDSVIS), and for orthodontia (DDSORTV). The fourth variable totals the participant's expenses for routine and special dental services (DDSEXP). The four variables are constructed similarly for Dayton participants and for nonDayton participants.

For Dayton participants present at baseline, the construction method resembles that for the class 2 variables, starting with responses to the baseline trigger questions. Unless the participant answered No to all four questions, the number of relevant visits or amount of expenses was counted from the baseline dental supplements. For Dayton participants not present at baseline, class 3 variables have the same construction flaw as the class 2 variables.

For nonDayton participants present at baseline, class 3 variables are constructed by first checking the relevant class 2 variable(s) to determine whether the participant had any visits for special services, routine and special services, or orthodontia. If they did, the number of relevant visits or amount of expenses was counted using the baseline dental supplements. For those not present at baseline, the method was identical except that the visits and expenses were counted from the EVF new person supplement rather than the baseline dental supplements.

INPUT VARIABLES

DE11178 (Seattle) During the last 12 months--that is, since (DATE OF INTERVIEW) a year ago--have you been treated or examined by any dentist? That would include periodontists, orthodontists, oral surgeons, and so on.

1. Yes
2. No

- DE11179 (Seattle) During the past 12 months--since (DATE OF INTERVIEW) a year ago--how many times did you visit a dentist for orthodontia treatment?
- DE11482 Is there a particular dentist or dental clinic you usually go to when you need dental care?
1. Yes
 2. No
- DE11483 Were you treated or examined by any (other) dentist during the last twelve months? For example, orthodontists, periodontists, oral surgeons, and so forth?
1. Yes
 2. No
- DE11484 WERE (SOME/NO) DENTISTS NAMED IN PREVIOUS QUESTION? CIRCLE ONE:
1. Some dentist(s) named
 2. No dentist(s) named
- DE11485 (Dayton) Did you see a dentist for any of the following reasons during the last twelve months? (HAND CARD 10 AND READ LIST): fillings, inlay work, bridgework or replacement of teeth, gum treatments, cleaning, or any other. (NonDayton) During the last 12 months, did you see a dentist for any reason--such as fillings, bridgework, gum treatments, pulling or replacing teeth, cleaning, check-up, or anything else?
1. Yes
 2. No
- DE11730 (Massachusetts and South Carolina) What is the name of that dentist or dental clinic? (MAXIMUM: 4)
- DE12011 (Massachusetts and South Carolina) In the last 12 months, that is, since (DATE OF INTERVIEW) a year ago, have you been treated or examined by (this dentist/this clinic/any of these dentists or clinics)?
1. Yes
 2. No
- DE12012 (Massachusetts and South Carolina) Since (DATE OF INTERVIEW) a year ago, were you treated or examined by any (other) dentist? That would include periodontists, orthodontists, oral surgeons, and so on.
1. Yes
 2. No

- DEI12038 (NonDayton) What was the total cost of (that visit/those visits)--including costs covered by insurance or paid by some other source? (SPECIAL SERVICES)
- DEI12039 (NonDayton) Besides (that/those) (NUMBER OF VISITS IN DEI12085) visit(s), how many other visits did you make to (PROVIDER)?
- DEI12042 (NonDayton) What was the total cost of (that visit/those visits)--including costs covered by insurance or paid by some other source? (ROUTINE SERVICES)
- DEI12043 (NonDayton) Since a year ago, did you receive any:
1. SERVICES IN BOTH A-D AND E-L
 2. SERVICES IN A-D
 3. SERVICES IN E-L (Seattle only)
 4. NO SERVICES
- A. CHECK-UP OR EXAM
- B. TEETH CLEANED
 - C. X-RAYS
 - D. FLUORIDE TREATMENT
 - E. TOOTH OR TEETH FILLED
 - F. CROWNS, CAPPING OR INLAYS
 - G. DENTURES, PLATES, OR BRIDGWORK--MADE, REPAIRED, REPLACED, OR ADJUSTED
 - H. GUM TREATMENT
 - I. TOOTH OR TEETH PULLED
 - J. ROOT CANAL
 - K. ORAL SURGERY
 - L. OTHER
- DEI12056 (NonDayton) Did (PROVIDER) give you any other kind of dental care, for which (PROVIDER) charged in addition to the charges for orthodontia?
1. Yes
 2. No
- DEI12080 IS THIS DENTIST YOUR USUAL PROVIDER OF DENTAL CARE? CIRCLE ONE:
1. Usual provider
2. Other provider
- DEI12081 (Dayton) Have you been treated or examined by (USUAL DENTIST) in the last twelve months? (NonDayton) Since (DATE OF INTERVIEW) a year ago have you been treated or examined by (PROVIDER)?
1. Yes
2. No
- DEI12083 Were any of the visits you made to any dentists for orthodontia--teeth straightening?
1. Yes
2. No
- DEI12084 (Dayton) How many times did you go to (DENTIST) in the past 12 months? Please include visits for any reason, including (HAND CARD 9 AND READ LIST)
fillings, inlay work, bridgework or replacement of teeth, gum treatment, cleaning, or any other.
(Dayton) How many of those visits to (DENTIST) were to have your teeth cleaned, x-rayed, or checked only (i.e., no fillings were done)?
(Dayton) What was the cost of those visits during the last twelve months including costs covered by insurance?
Since (DATE OF INTERVIEW) a year ago--how many times did you visit (PROVIDER) for orthodontia treatment?
- DEI12085 (NonDayton) DENTAL PROVIDER IDENTIFIER
DEI13653 (NonDayton) How many of those visits to (DENTIST) were to have your teeth cleaned, x-rayed, or checked only (i.e., no fillings were done)? (REPEAT ROUTINE SERVICES)
- DEI12087 (NonDayton) What was the total cost of (that visit/those visits)--including costs covered by insurance or paid by some other source? (ROUTINE VISITS--REPEAT SERVICES)
- DEI14055 (NonDayton) Altogether, how many times did you visit (PROVIDER) since (DATE OF INTERVIEW) a year ago for those services?
DEI14072 (NonDayton) What was the total cost of (that visit/those visits)--including costs covered by insurance or paid by some other source? (SPECIAL SERVICES)
- DENTCNT (Massachusetts and South Carolina) Temporary variable--number of dental providers listed on EVF new person supplement
HAVEDDS1 Any visit for routine dental services
HAVEDDS2 Any visit for special dental services
HAVEDDS3 Any visit for orthodontia

VARIABLE FSD
Usual dentist at baseline

DDSUUSUAL is an 8-character alphanumeric code that uniquely identifies the participant's usual dentist. All such provider codes are defined in an HIE data file (see Appendix B, item RF2).

Appendix A PARTICIPATION INCENTIVE PAYMENTS

HIE-insured families were paid a participation incentive (PI) if their HIE plans could conceivably impose a greater financial burden than their existing health insurance policies.¹ Calculated yearly, the PI consisted of (1) an amount calculated to be the *maximum* difference between what the family would have to pay for health care under its HIE insurance plan and what it would have paid under its existing insurance plan, unless (2) the premium a family paid to maintain its existing insurance exceeded the maximum difference. In that case, the family was paid an amount equal to the premium payment.

The calculation of item 1 ignored the family's actual medical expenses. To illustrate, consider family X whose HIE plan specified 95 percent coinsurance up to a maximum out-of-pocket expenditure of \$450, above which care was free.² Family X's existing insurance specified a \$100 deductible, above which the family had to pay 20 percent coinsurance. Under its HIE policy, the family had to spend \$473.68 for medical services (with the 5 percent reimbursement) to reach the \$450 out-of-pocket maximum. For the same charge under its existing insurance, the family would have paid \$100 (the deductible) plus 20 percent of the amount between \$100 and \$473.68. The maximum difference was thus $\$473.68 - 100 - 0.2(473.68 - 100) = 298.94$. Family X was entitled to \$298.94 per year for that portion of its participation incentive.

The total PI could not exceed the MDE specified in the family's HIE plan unless the family's share of its insurance premium exceeded the MDE. For example, if family X paid an insurance premium of \$300, its

¹Participation incentive payments were not offered to families receiving free care (plan A, described on p. 3) who had no premium to pay, families who had no health insurance before the experiment, and families whose other policies had equal or less generous terms, under all circumstances, than their HIE plan.

²In HIE terminology, maximum out-of-pocket expenditure is called "maximum dollar expenditure," or MDE.

total PI entitlement was \$450, not \$598.94 ($300 + 298.94$). If the family paid a premium of \$600, its PI was \$600 because the premium exceeded the MDE of \$450. On the other hand, a family who had a high MDE in its HIE plan and an existing insurance policy with 0 percent coinsurance, no deductible, and an employer-paid premium was entitled to the full MDE amount. The purpose of PI payments was to ensure that a family was no worse off financially by participating in the experiment--whether because of the cost of its insurance premium or the "worse" terms of its HIE insurance plan compared with its existing policy.³

As encouragement for families to complete their assigned enrollment terms, a portion of the family's annual PI was withheld until the last year of the term.⁴ The family received its full annual PI that last year, and the amount previously withheld was paid as part of a completion bonus when the family completed the physical screening examination and medical health questionnaire at exit.⁵

To measure enrollees' responsiveness to PI payments, a subset of families received their full annual PI in the next-to-last, as well as the last, year of their term. That "super PI bonus" was offered to 44.4 percent of the families assigned to insurance plans requiring 95 percent coinsurance, the highest rate (plans K-N, described on p. 3). Super PI

³Calculation of PI is further described in Clasquin and Brown, op. cit. The formula on p. 20 of that report should read $PI = \max[K \times PG, PR]$.

⁴The percentage of PI withheld depended on the site and assigned enrollment term, as follows:

	3-yr Term	5-yr Term
Dayton	25	15
Seattle	25	15
Fitchburg	33.3	25
Franklin Co.	33.3	25
Charleston	33.3	20
Georgetown Co.	33.3	20

If the discounted PI was not enough to reimburse the cost of the family's insurance premium, however, the family received the full amount of its premium. The difference between the premium and the discounted PI was then subtracted from the withheld amount.

⁵The rest of the completion bonus was the largest annual PI to which the family had been entitled during its enrollment (minus the withheld amount) or \$120, whichever was greater.

recipients represented all sites and both terms of enrollment except Dayton enrollees assigned to three year terms, who had already begun their next-to-last year when super PI was instituted. Within the 95 percent coinsurance plans, super PI recipients were chosen using the "finite selection model." That model was developed by Rand to assign enrollees to experimental insurance plans so that, across plans, families resembled each other in 24 health and socioeconomic characteristics.⁶

⁶The finite selection model is described in Morris, op. cit.

Appendix B HIE DATA FILES

This appendix identifies the data files that the HIE has either issued or expects to issue, grouped in topical series. As a tape of each file is issued, a companion codebook is published as a Rand Note. One Note may contain the codebooks for several files. In addition to issuing files and codebooks, HIE staff will prepare a user's guide to provide assistance in understanding and using the HIE database for analysis.

The list below cites codebooks for the files that have been issued, and file names for those not yet issued. At this time it is impossible to predict exact issue dates for future files and codebooks. This preliminary list is to alert prospective users to the variety of subject matter covered by the HIE database and to the existence of related files that should be used together.

Before ordering a file or codebook, be sure to verify its availability with the Rand Publications Department, using the reference numbers cited below (e.g., MS3).

Appendix C

DATA SOURCES

This appendix identifies the data collection instruments and other sources of data in the full sample demographic file. The source types, shown as centered headings in the table below, are the EVF and its supplements, baseline questionnaire and its supplements, screening questionnaire, annual income report, and HIE administrative files. Within each category, separately administered versions of the instruments are identified by HIEI number, general topic addressed, site covered, inclusive dates administered, and FSD variables to which they contributed.

APPENDIX C (cont.)

HIEI Number	Topic	Site	Dates Administered	Relevant Variables
EVF (interviewer-administered)				
39	Family changes since baseline	Dayton	10/74-1/75	MARSTAT, ESTATUS, INSURED, PUBLINS
123	Screener for family changes since baseline	Seattle	11/75-9/76	MARSTAT
124	Nature of family changes since baseline	Seattle	11/75-9/76	OCC, INDUSTRY, DEIWG1E, SSI
176	Screener for family changes since baseline	Massachusetts	5-10/76	MARSTAT
177	Nature of family changes since baseline	Massachusetts	5-10/76	OCC, INDUSTRY, DEIWG1E, SSI
187	Screener for family changes since baseline	South Carolina	9/76-1/77	MARSTAT
188	Nature of family changes since baseline [1]	South Carolina	9/76-1/77	INDUSTRY, DEIWG1E, SSI
377	Nature of family changes since baseline [1]	South Carolina	9/78-1/79	OCC, DEIWG1E

[1] For 3-year South Carolina enrollees who were members of the PEG, HIEIs 188 and 192 are the "preenrollment" EVF and EVF new person supplement, respectively; HIEIs 377 and 380 are the "enrollment" EVF and EVF new person supplement.

APPENDIX C (cont.)

NOTE: "Type" refers to whether the variable values are alphanumeric (A), integer (I), or fixed-decimal (F). For fixed-decimal variables, the placement of the decimal point is shown in the "LENGTH" column; the number to the right of the dot "." tells the number of digits to the right of the decimal point (e.g., 8.2 means the numbers will be written "nnnnn.nn"). Missing values are written differently for each variable type: A = bbbbbbbb, I = bbbbbbb., F8.1 = bbbbbbb.b, F8.2 = bbbbb.bb, and F8.6 = b.bbbbbbb ("b" meaning blank). An asterisk indicates that the variable has special missing values in the form bbbbbbbA. To obtain the appropriate positive and missing values, read all values as alphanumeric, then convert "I" data to integers and "F" data to the specified floating-point format.

NOTE: "Type" refers to whether the variable values are alphanumeric (A), integer (I), or fixed-decimal (F). For fixed-decimal variables, the placement of the decimal point is shown in the "LENGTH" column; the number to the right of the dot "." tells the number of digits to the right of the decimal point (e.g., 8.2 means the numbers will be written "nnnnn.nn"). Missing values are written differently for each variable type: A = bbbbbbbb, I = bbbbbbbb., F8.1 = bbbbbbb.b, F8.2 = bbbbb.bb, and F8.6 = b.bbbbbbb ("b" meaning blank). An asterisk indicates that the variable has special missing values in the form bbbbbbbA. To obtain the appropriate positive and missing values, read all values as alphanumeric, then convert "I" data to integers and "F" data to the specified floating-point format.

GLOSSARY

Adjunct enrollee	Uninsured member of insured family/household (person/family of interest) or member of Dayton control group.
Attrition	Departure from the experiment by voluntary withdrawal before completion of assigned enrollment term.
Baseline participant	Person considered for enrollment at the beginning of the experiment in the site. May or may not have enrolled, either remaining a baseline-only participant or becoming an enrollee.
Baseline-only participant	Person considered for enrollment at the beginning of the experiment in the site who did not enroll.
Contract year	Administrative unit of time for enrollees; year period(s) reckoned from date family signed enrollment contract. First contract year began on enrollment date, second contract year began on first anniversary of enrollment, and so on.
Dayton control group	Group of 669 uninsured enrollees who participated from November 1974 to February 1976. Formed to compare the community's use of health services with use by insured Dayton enrollees. Members retained their own insurance but were asked to complete the same questionnaires as insured enrollees. Group was discontinued because complete data appeared unobtainable from them.
DEI	Data element indicator. Unique label assigned to every element in database. Most DEIs represent questions on data collection instruments.
Enrollee	Person whose family or household signed an enrollment contract with the HIE. An insured person or uninsured person. Any of the following: HIE-insured, HMO-insured, person of interest, family of interest, member of Dayton control group. (See also "adjunct enrollee," "insured enrollee.")
EVF	Enrollment verification form (see Table 2, item 3). With its supplements ("new person," employment, new household head), the LEVF is a primary data source for the full sample demographic file.

Exit	Departure from the experiment after completion of assigned enrollment term, three or five years.
Experimental insurance treatment	One of sixteen groups in which experimental subjects participated. Fifteen were insurance plans with varying coinsurance rates, out-of-pocket expenditure limits, and both FFS and HMO delivery systems. The sixteenth was the HMO control group.
Family of interest	Uninsured, self-supporting member of insured family or member of uninsured self-supporting family residing in the household of an insured family. Compare "person of interest."
FFS	Fee for service.
FSD	Full sample demographic (file name).
GHC	Group Health Cooperative of Puget Sound, the Seattle HMO that participated in the experiment.
HIE	Health Insurance Experiment.
HIEI	Health Insurance Experiment Instrument. Each separately administered version of a data collection instrument was given a unique HIE number.
HIE-insured	Enrollee assigned to an experimental health insurance plan paid by the HIE (plans A-O, described on pp. 3-4). Includes members of HMO experimental group. Compare "HMO-insured."
HMO	Health maintenance organization; Group Health Cooperative of Puget Sound, the HMO that participated in the HIE.
HMO control group	Seattle enrollees drawn at random from existing HMO members who met HIE eligibility criteria. The HIE did not pay their insurance premiums.
HMO experimental group	Seattle enrollees experimentally transferred to HMO from fee-for-service system. The HIE paid their insurance premiums.
HMO-insured	Member of HMO control group.
Insured	Either HIE-insured or HMO-insured.
Insured enrollee	Person assigned to an experimental treatment; HIE-insured or HMO-insured.

MDE	Maximum dollar expenditure--maximum out-of-pocket expense to be paid by HIE-insured family before health care was free. The amount was a function of the family's assigned insurance plan.
Participant	Anyone with a record in the HIE database; includes baseline-only participants and enrollees.
PEG	South Carolina preenrollment group.
Person of interest	Uninsured member of insured family/household who was financially dependent on insured family/household. Compare "family of interest."
PI	Participation incentive.
Preenrollee	Person who participated in preenrollment phase in South Carolina; PEG member. May or may not have formally enrolled in the experiment as a primary enrollee.
SAS	Statistical Analysis System. HIE files contain data in both SAS and character formats.
SSI	Supplemental Security Income.
Suspension	Revocation of HIE-provided insurance benefits because of ineligibility expected to be temporary. Suspended persons remained enrollees.
Termination	Involuntary departure from the experiment. Cancellation of enrollment for permanent ineligibility or failure to fulfill obligations.
Uninsured	Neither HIE-insured nor HMO-insured. Person/family of interest or member of Dayton control group. Uninsured persons did not necessarily lack health insurance; they were uninsured only with respect to HIE experimental treatments.
